

I want to become a better me &
I want to help to create a simplest world

Mission-driven full stack developer committed to build better experiences for users and passionate about find new ways for growth.

I started my way on tech industry as a software vendor and because of that I was able to know about the dev job, after that I started to learn by myself and with a little of good luck and tons of effort and discipline I could find my first dev job creating wordpress sites and as I have a management degree too I was able to connect that job with marketing and business developing.

At this time I'm working for Desansiedad, my third tech job, I'm the leader of the web department and I strongly participate on creating marketing strategies and bring them to life by creating and assembling all the components for lead funnels and mapping the automations needed. I'm confident about my skills on marketing, UX and CRO, but now I want to jump to a full dev job because I'm sure that I'm capable of more and this is a great path for growing and for challenging myself.

Current focus: Node.js / Vuex

Projects
